

Zero-Watt-lighting

world's most effective and reliable lighting

Zero Watt Lighting is dimming technology, which decrease energy consumption under measurable levels. In passive dimming mode you can illuminate your home to the equivalent of having **100 candles**, without paying any energy bill.

In passive dimming mode does not consume any measurable energy , but still shines as bright as 100 candles. Thanks to passive dimming mode, you do not need go switch-on lights, because your see everything, you are not dazzled after ON, and blinded after OFF. Everyone can living in luxury and comfortable home, with permanent lighting.

So, light up your home without paying an electricity bills.

Minipanel (flat downlight)

100-140V, consumption **6W**, 800-1000lm, 180°, colour 6500°K,
dimensions 100x100x16mm, weigh 96g, mounting with 2 wood screw
(shining as 100W bulb, or 20W fluorescent) [32 times longer lifetime, than LED]

Zero Watt Dimmer

100-250V, dimensions 70x110x25mm, weigh 50g, mounting with 2 screw,
three position switch -
position II – ON consumption **6W** shining as **300** Candles,
position I - DIM consumption **0,3W**(not measurable) shining as **30** Candles,
position 0 - OFF
